

WKND Adventures (masterclass-demo) - Author Guide

June 2, 2026

WKND Adventures — Author Guide

Welcome to the authoring guide for WKND Adventures, delivered on Adobe Experience Manager Edge Delivery Services. This site is built for outdoor adventure content: landing pages, field notes, blog articles, and reusable blocks styled for the WKND Adventures brand.

Quick Reference

Resource	URL
Document Authoring	https://da.live/#/znikolovski/masterclass-demo/
Preview	https://main-masterclass-demo-znikolovski.aem.page/
Live	https://main-masterclass-demo-znikolovski.aem.live/
Block Library	https://da.live/#/znikolovski/masterclass-demo/.da/library
Bulk Operations	https://da.live/apps/bulk
Figma design system	https://www.figma.com/design/6cx6VFkkgGJqijhoROnYDE/WKND-Adventures—EDS-Design-System

Sites

Site	Content Source (DA)	Preview	Live
master-class-demo	znikolovski/masterclass-demo	https://main-masterclass-demo-znikolovski.aem.page/	https://main-masterclass-demo-znikolovski.aem.live/

This project uses a standard single-site setup: one code repository (znikolovski/masterclass-demo) mapped to one content space in Document Authoring (content.da.live/znikolovski/masterclass-demo/).

Getting Started

Access Requirements

- Adobe ID with access to Document Authoring for org znikolovski and site masterclass-demo
- Permission to preview and publish pages (request from your site administrator if buttons are missing)
- Familiarity with the Block Library sidebar in DA

Your First Page

1. Open Document Authoring: <https://da.live/#/znikolovski/masterclass-demo/>

2. Navigate to the folder where the page should live (for example / for the homepage or /field-notes for stories).
3. Create a **New document**.
4. Insert blocks from the Library sidebar (or start from a Page Template).
5. Add a **Metadata** block at the bottom of the page with title, description, and optional template.
6. Click **Preview** to verify on the preview environment.
7. Click **Publish** when ready for the live site.

Content Organization

Site Structure

Content is stored in Document Authoring under znikolovski/masterclass-demo. Typical folders include:

Area	Typical path	Purpose
Homepage	/index	Main WKND Adventures landing experience
Field notes	/field-notes	Stories, gear guides, and trail content
Blog / articles	Paths under content hubs	Long-form articles using the blog template
Fragments	/fragments/...	Reusable sections included via the Fragment block
Global nav	/nav	Site navigation (not a regular page)
Global footer	/footer	Site footer (not a regular page)

Navigation and footer are documents in DA, not blocks on every page. The site code loads /nav and /footer automatically.

Languages

This project is English only at launch. There are no language root folders (such as /en or /fr) in the content tree. If localization is added later, placeholders and bulk metadata can be extended per language.

Design reference (Figma)

The companion Figma file **WKND Adventures design system** is the visual source of truth for WKND Adventures. Use it when you need to see layout intent, spacing, typography, or how a block should look before or while authoring in Document Authoring.

Primary reference: the Blocks — Hi-Fi page shows polished block visuals aligned to the blocks in this guide.

When to use Figma	What to look at
Planning a new page	Templates — Hi-Fi for landing, blog, and field-notes layouts
Inserting or styling a block	Blocks — Hi-Fi — each frame is labeled block / {block-name}
Confirming field order in DA	Wireframe frames (authoring structure reference only) — rows mirror DA table structure
Choosing colors, type, or buttons	Foundations and Atoms
Onboarding	Getting Started in the Figma file

Open the file: <https://www.figma.com/design/6cx6VFkkgGJqijhoR0nYDE/WKND-Adventures—EDS-Design-System>

Figma pages

Page	Purpose	Link
Getting Started	How the design system is organized	Open
Foundations	Color, type, spacing, and brand tokens	Open
Atoms	Buttons, sections, and small UI pieces	Open
Blocks — Hi-Fi	Polished block visuals (primary block reference)	Open
Templates — Hi-Fi	Finished page compositions	Open

Hi-Fi and authoring: On the Blocks — Hi-Fi page, each frame is labeled block / {block-name} and shows the finished visual design. Use these hi-fi frames when you need final layout, typography, and imagery reference. Wireframe frames elsewhere in the file can be used as an authoring structure reference only — their rows mirror the table structure you edit in Document Authoring (one row per field).

Block Library

The Block Library is the sidebar in Document Authoring where you browse and insert blocks and page templates.

What	Details
Open in DA	Library icon in the DA editor, or https://da.live/#/znikolovski/masterclass-demo/.da/library
What's in it	All blocks and templates listed in the tables below
How to use	Click a block or template to insert it at the cursor

When editing a page, prefer the Library over typing block names manually—this keeps structure correct for Edge Delivery Services.

Available Blocks

The following blocks are registered in the project library and available to authors. Header and footer are applied globally by the site and are not inserted on individual pages.

Block	Purpose	Variants / notes	When to use	Figma
Hero Adventure	Full-width adventure hero with background image, eye-brow, heading, intro, and dual CTAs	no-image (text-only hero)	Top of landing pages and campaign pages; pair with hero-adventure-container section style	Hi-Fi
Carousel Hero	Rotating hero slides (image, heading, text, CTA)	—	Homepage or landing promos with multiple featured messages	Hi-Fi
Carousel Blog	Blog/field-notes carousel; can auto-pull latest posts	Section styles: carousel-blog-container, carousel-blog-wrapper	Homepage “recent stories,” field notes hub, blog indexes	Hi-Fi
Hero	Base hero block (boilerplate)	—	Legacy/simple hero; prefer Hero Adventure for WKND styling	Hi-Fi
Cards	Grid of image + text cards	—	Feature grids, related content, visual lists	Hi-Fi
Cards Steps	Numbered process steps (step + heading + paragraph)	—	“How it works,” methodology, planning steps	Hi-Fi
Columns	Generic multi-column layout	—	Simple side-by-side content	Hi-Fi
Columns Featured	Large image + pretitle + heading + paragraph + CTA	—	Single featured article or promo	Hi-Fi
Columns Article	Alternating image/text article teasers	—	Article listings, recent posts previews	Hi-Fi
Columns Gallery	Three-up photo gallery on dark background	—	Photography showcases, trail galleries	Hi-Fi
Accordion FAQ	Expandable question and answer	—	FAQ sections on light backgrounds	Hi-Fi
Teaser Grid	Grid of teasers (image, heading, text, CTA)	teaser-2text-cols, teaser-3cols	Grid of teasers (image, heading, text, CTA)	Hi-Fi
Field Notes	Field notes (image, heading, text, CTA)	—	Field notes (image, heading, text, CTA)	Hi-Fi
Blog	Blog post (image, heading, text, CTA)	—	Blog post (image, heading, text, CTA)	Hi-Fi

Note: Fragment, YouTube Video, and Section Metadata do not yet have dedicated hi-fi components. Their Figma links point to the Blocks — Hi-Fi overview page. The Hero block shares the Hero Adventure hi-fi component; the generic Carousel block shares the Carousel Hero hi-fi component.

Page Templates

Template	Purpose	Required metadata	How to apply	Figma
Landing Page	Marketing/home-style page with hero, accent sections, and default content	title, description	template: landing-page in Metadata	Hi-Fi
Blog Article	Long-form story with hero by-line, narrow reading column, related modules	title, description, image (social)	template: blog-article in Metadata	Hi-Fi
Field Notes	Hub for field stories with intro and Carousel Blog	title, description	template: field-notes in Metadata	Hi-Fi

Templates pre-fill section structure and blocks. After inserting a template, replace placeholder text and images, then preview before publishing.

Configuration Sheets

Configuration sheets live in Document Authoring as spreadsheets (or JSON) at the site root. They are not edited on individual pages.

Sheet	Location in DA	Purpose	When to update
Placeholders	/placeholders	Reusable labels, button text, and translated strings	UI copy changes, new languages
Redirects	/redirects	Map old URLs to new URLs (source → destination)	Page moves, deletes, URL re-names
Metadata	/metadata	Default metadata by URL pattern	SEO defaults per section (e.g. all field notes)
Block library index	blocks.json, library/templates.json (code repo)	Developer-maintained library registry	When developers add blocks —authors use DA Library UI

There are no placeholders.json, redirects.json, or metadata.json files in the code repository; manage these sheets directly in DA.

Publishing Workflow

Environment	Domain	Purpose
Preview	*.aem.page	Review changes before production
Live	*.aem.live	Public website

Workflow: Edit in DA → Preview → Publish → changes appear on live (allow 1–2 minutes for cache).

Bulk publish: <https://da.live/apps/bulk> for multiple pages or sheets at once.

Common Tasks

Task	Steps
Create a page	DA → folder → New document → add blocks → Metadata (title, description) → Preview → Publish
Edit a page	Open document in DA → edit → Preview → Publish
Delete a page	Add redirect first in /redirects → delete document → publish redirects
Update navigation	Edit /nav document → Preview → Publish
Update footer	Edit /footer document → Preview → Publish
Add a reusable section	Create fragment under /fragments/... → insert Fragment block on pages
Apply a template	New document from Library template, or set template: in Metadata

Sections and Section Metadata

Sections group content. In DA, insert a horizontal rule (---) to start a new section.

Add a **Section Metadata** block as the last block in a section:

Section Metadata
style
(style name from table below)

Available Section Styles

Style	Effect
dark	Dark background, light text
inverse	Dark background with centered/narrow layout and styled buttons
narrow	Constrains content width (~800px) for reading
accent	Brand accent background, centered CTAs
secondary	Light gray background for supporting content
light	Light background padding
highlight	Same as light—emphasis sections
hero-adventure-container	Full-bleed hero (no side padding)
carousel-blog-container	Full-bleed wrapper for blog carousel header area
carousel-blog-wrapper	Carousel blog content section styling

Combine styles where documented in templates (for example inverse + narrow on blog sections).

Page Metadata

Add a **Metadata** block at the bottom of each page.

Property	Required	Purpose	Example
title	Yes	Browser title and SEO	Winter Alpine Routes
description	Yes	SEO meta description	Planning tips for alpine winter trips.
image	Recommended	Social sharing image	Path or DAM reference
template	No	Page template	blog-article, landing-page, field-notes
robots	No	Search indexing	index, follow or noindex, nofollow
target	No	Adobe Target experiments	on only when running a test
analytics	No	Web SDK page view	Leave default, or on / off
adventureCategory	No	Analytics segment (activity)	climbing, trekking, winter-alpine, etc.
journeyStage	No	Analytics segment (intent)	inspiration, discovery, planning, community

Leave adventureCategory and journeyStage empty to let the site infer values from the URL when possible.

Images and Media

Method	How
Drag and drop	Drag images into the DA editor
AEM Assets	Use the Assets sidebar in DA
YouTube	Use the YouTube Video block with a full youtube.com oryoutu.be URL

Best practices: Use descriptive filenames, always set alt text, and prefer WebP/JPEG within reasonable file sizes. Edge Delivery Services optimizes images on delivery.

Troubleshooting

Issue	Solution
Page not updating after publish	Wait 1–2 minutes; hard refresh (Cmd+Shift+R / Ctrl+Shift+R)
Block looks wrong	Compare structure to Library preview or Blocks – Hi-Fi; check variant spelling (e.g. no - image)
Images missing	Confirm image is uploaded in DA; check path in preview
Wrong page layout	Verify template in Metadata matches template name exactly
Fragment empty	Confirm fragment path points to /fragments/... and fragment is published
Carousel blog empty	Add manual slides in the block, or ensure blog index pages exist for auto-feed
